

Business Process Improvement

Tailored Technologies helps you do what you do...better

Process. Productivity. Profit.

Designed to help organizations “work smarter,” Tailored Technologies’ business process improvement services provide tactics to improve profitability and operations.

The challenge in most organizations is that those who are accountable for the efficiency and effectiveness of a process — the “process owners” — are often too close to the problem or they are not well positioned to take an enterprise-wide view of the issue. Consequently, when process owners use traditional problem-solving methods or try a quick fix, they often overlook the root cause of the matter.

Tailored Technologies:

- Provides you with a clear understanding of the way things happen within your organization and identifies opportunities for improvement
- Provides an unbiased, third-party perspective
- Evaluates processes from within and between cross-functional departments
- Identifies critical challenges that must be addressed
- Provides strategic recommendations to refine and streamline processes
- Reduces and eliminates the waste of money, resources, and time

“Richard Nathan is the consummate professional. He invested a tremendous amount of time in learning the inner workings of our company. Richard then changed some of our processes to increase efficiency and cut costs. His experience and expertise were invaluable to us. I would recommend Tailored Technologies to any business.”

—David Rosner, Senior Vice President, Marketing & Administration, FramERICA
